SANITY SUITE RUNTIME	QA TOOLS ADOPTED DEPT-WIDE	DEFECTS REPORTED & TRACKED	IOS APP SHIPPED SOLO

PROFILE

QA engineer covering the full testing lifecycle — requirements, test design, manual and exploratory testing, defect reporting and closure — on a complex, highly integrated platform at adidas. I also **build tooling that makes QA faster**, and have worked remotely with distributed teams since 2022.

EXPERIENCE

adidas

Jul 2022 – Present

Software QA Developer PROMOTED

Aug 2025 – Present

> Core platform app whose scope, once covered by ~16 QA and ~18 developers, is now handled by 5 QA and 8 developers. It feeds a wider ecosystem of downstream apps and reads from others — end-to-end testing is highly complex.

Defect tooling. Built two AI-assisted defect-reporting tools — one surfacing edge cases, one drafting tickets to our template. Started on my project, now **published department-wide**.

Knowledge sharing. Presented both tools at adidas HQ to the full project, directors included, to drive adoption across other projects.

Triage. Run defect triage meetings with lead developers and POs to prioritise by impact and risk.

Test planning. Analyse requirements, design test scenarios and plans, and prioritise execution by business risk.

Automation. Designed a **Playwright framework** from the ground up on Jenkins and CI/CD, migrating the legacy Selenium suite onto it: from a barely passing run of **~3 h to a green 40-minute sanity suite** (63 scenarios, 100 examples).

Migration. Led a full frontend view migration end to end with three developers, reporting and triaging **350+ defects** through it.

Software Developer – QA, Junior

Jul 2022 – Aug 2025

Defect reporting. Reported and tracked **250+ defects** in JIRA with clear, reproducible steps; reproduced support-raised issues, then verified and closed fixes.

Manual QA. Exploratory and regression testing across internal applications, probing robustness beyond scripted cases.

Risk discovery. During the backend migration to the new application, uncovered an **entire undocumented attribute-cascade flow** that had been missed in scoping — no documentation existed anywhere — and mapped it so it could be tested and rebuilt.

End-to-end. Led e2e testing across upstream and downstream systems whenever a feature cascaded into dependent apps.

Documentation. Owned the team's test cases, plans and procedures in Confluence.

Automation. REST-assured + Cucumber (BDD) on Jenkins, and Selenium with the Page Object Model.

SIDE PROJECT

PackValet — iOS app, live on the App Store. Designed, built, tested and shipped solo: AI packing lists from destination weather, trip length and airline rules, refined by what you forgot on past trips.

TESTING

Practices

Test case & scenario design, test planning, manual, exploratory and regression testing, end-to-end testing, API testing, BDD

Defect management

Reporting, triage, reproduction, verification and closure

Process

SDLC, Agile / SCRUM, requirement analysis, risk-based prioritisation

TOOLS

Test & defect management

Xray, BrowserStack Test Management, JIRA, Confluence

API & backend

Postman, Swagger, REST-assured, SQL, Java

UI automation

Playwright, Selenium (POM), Cucumber, TypeScript

CI/CD

Jenkins, Git, GitHub

EDUCATION

ISTQB Certified Tester (CTFL)
October 2023

BSc Multimedia Engineering
Universitat d'Alacant · 2017–2021

LANGUAGES

Spanish — Native
Catalan — Native
English — daily working language at adidas since 2022
